165032_Cuedts_singleNEUROIMAGING.rnw

compiled December 3, 2018

This file summarizes 165032's behavioral performance on the DMCC Cuedts task, NEUROIMAGING version.

Quality Control: expected stimuli and responses?

The first block of code reads in the eprime output files (e-recovery or .csv), and then checks whether the expected number and types of trials was present in each run and block. Unless a run was known to end early, any error messages printed below should be investigated.

```
## [1] "Found an error in the Cuedts trial counting or stimulus matching? FALSE"
```

These plots show the time and type of every trial (blue and green) and response (red and pink); black tick marks indicate correct trials. The trial types and responses should be random (e.g., not an entire block of letter), and errors should be approximately equal across the runs (check if a participant appears to have stopped responding or suddenly increased in errors).
Single-subject statistics for 165032

RT: We hope that RT will be faster (shorter bars) on Inc than noInc in proactive, but faster on noInc in reactive.
Error Rate: We hope that the error rate will be worse (higher bars) on InCongruent than Congruent trials, with this difference smaller in reactive than proactive.
Robust statistics for RT? TRUE (Robust statistics never used for ERR, since typically very few errors.)

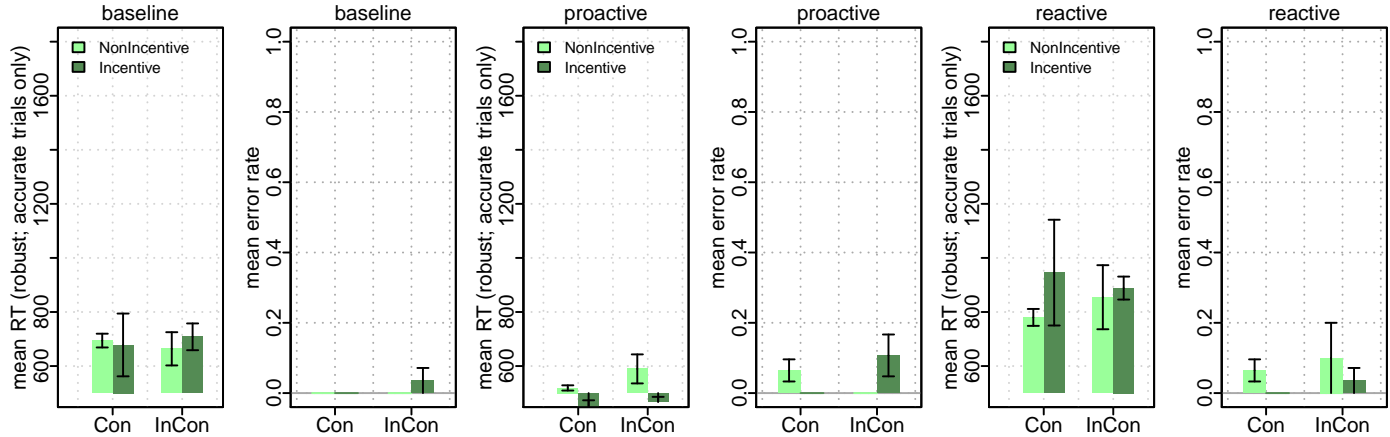

```
## [1] divided by Incentive/NoIncentive and Congruent/Incongruent:

## [1] (note: fewer trials in each session since first trial of each block ommited)
```

```
## [1] "Reward rate: proactive NonIncentive 0.944 (68 correct of 72 trials)."
## [1] "Reward rate: proactive Incentive 0.917 (33 correct of 36 trials)."
## [1] "Reward rate: reactive NonIncentive 0.931 (67 correct of 72 trials)."
## [1] "Reward rate: reactive Incentive 0.972 (35 correct of 36 trials)."
```

Cuedts derived measures for 165032

Calculated from the mean RT and error rates in the above table, InCongruent - Congruent, Incentive and noIncentive trials separately.

```
## [1] "Incentive TRCE baseline RT: 30.005 ERR: 0.036"
## [1] "Incentive TRCE proactive RT: 17.792 ERR: 0.107"
## [1] "Incentive TRCE reactive RT: -57.19 ERR: 0.036"
## [1]
## [1] "Nonincentive TRCE baseline RT: -30.51 ERR: 0"
## [1] "Nonincentive TRCE proactive RT: 70.479 ERR: -0.065"
## [1] "Nonincentive TRCE reactive RT: 74.729 ERR: 0.035"
```

The reward and critical RT (how fast the participant must respond to receive a reward in Proactive and Reactive) are in lines 8 and 3 (respectively) of the `CuedTS Tracking and Results.txt` files written by the eprime scripts during the final session. If this file is present, it is read and values printed below.

```
## [1] critical RT: 689
## [1] reward: $8.916
```
